

Project Rubric Table for Object-Oriented Programming 1

Criteria	Poor	Average	Good	Excellent	Project_Grade(80)
Requirements Quality & Documentation (10)	Incomplete or unclear requirements; minimal or no documentation. (0-1)	Partially complete requirements; basic documentation with gaps. (2-3)	Clear requirements; well-structured documentation with minor issues. (4-6)	Comprehensive, precise requirements; thorough, well-organized documentation. (7-10)	
Database Design (PostgreSQL) (30)	Poor schema design; significant flaws in structure or normalization. (0-4)	Functional schema with some inefficiencies or partial normalization. (5-10)	Well-designed schema; mostly normalized with minor inefficiencies. (11-18)	Optimal schema; fully normalized, efficient, and scalable design. (19-30)	
OOP Design & Backend Code (35)	Poorly structured code; lacks OOP principles; frequent errors. (0-5)	Basic OOP principles applied; code functional but lacks clarity or modularity. (6-13)	Solid OOP design; clean, modular code with minor issues. (14-21)	Exemplary OOP design; clean, modular, efficient, and error-free code. (22-35)	
Collaboration & GitHub Integration (5)	Minimal collaboration; poor or no use	Basic collaboration; inconsistent	Effective collaboration; consistent	Outstanding collaboration; seamless

	of GitHub features. (1)	GitHub usage (e.g., irregular commits). (2)	GitHub usage with clear commit history. (3)	GitHub integration with detailed commits and PRs. (4-5)	
Individual Presentation (20)	Unclear, disorganized; fails to convey project details. (0-2)	Basic presentation; covers key points but lacks clarity or engagement. (3-6)	Clear, organized presentation; effectively communicates project details. (7-12)	Polished, engaging presentation; clearly and confidently communicates project. (13-20)
